

ATLAS

Advanced Technology Lodging Access Solution

KABA[®]

ATLAS

There are many systems that must all interoperate, such as property management systems, point-of-sales systems, and self check-in kiosks to name only a few. Your access control system must integrate with these existing systems, make guests feel comfortable, ensure that your staff is productive, all while being able to adapt to future business needs.

For decades, ILCO has dedicated significant research and development resources to designing comprehensive access control systems specifically for the unique needs of the hotel industry. Combining advanced technology with superior hardware and unparalleled support, ATLAS (Advanced Technology Lodging Access Solution) is the optimum choice for uncompromising security.

ATLAS Benefits:

- Ease-of-use and simple implementation - Intuitive web-based user interface with full online help
- Capitalization on existing IT infrastructure - No additional cabling
- Connectivity between systems - Property management system and kiosk interfaces included at no extra fee
- Scalable and customizable - Unlimited number of encoders and workstations
- Compatible with RFID technology - Guests will love the user friendliness of the 790 contactless electronic lock

The ATLAS system

ATLAS Technology Optimizes Performance and Flexibility

Easy Implementation

By simply connecting an encoder and logging in to ATLAS over the Internet, your front desk, concierge, and VIP check-in stations are quickly up and running. There is no client software to install on individual workstations. User-friendly interfaces with on-screen help let your staff feel comfortable using the system after minimal training.

Extensive Keycard Functionality

Guests can charge point-of-sale (POS) purchases, enter their rooms, and access the parking garage, all with one keycard. Access data is on ISO track three, which frees up tracks one and two for other uses, such as POS and gaming systems. ATLAS offers essential keycard functions, including guest and staff keycards that auto-expire, limited-use keycards, emergency keycards and common door keycards. Staff keycards can be batch-encoded and then assigned individually. For maximum security, previous guest and staff keycards are automatically cancelled when a new valid keycard is used in the lock.

Powerful Auditing with Security and Productivity Monitoring

Comprehensive centralized auditing with a variety of built-in report templates allows management to trace security breaches and follow employees from lock to lock to monitor productivity. ATLAS system events and operations can be monitored in real-time using a monitoring manager.

Customizable Preferences

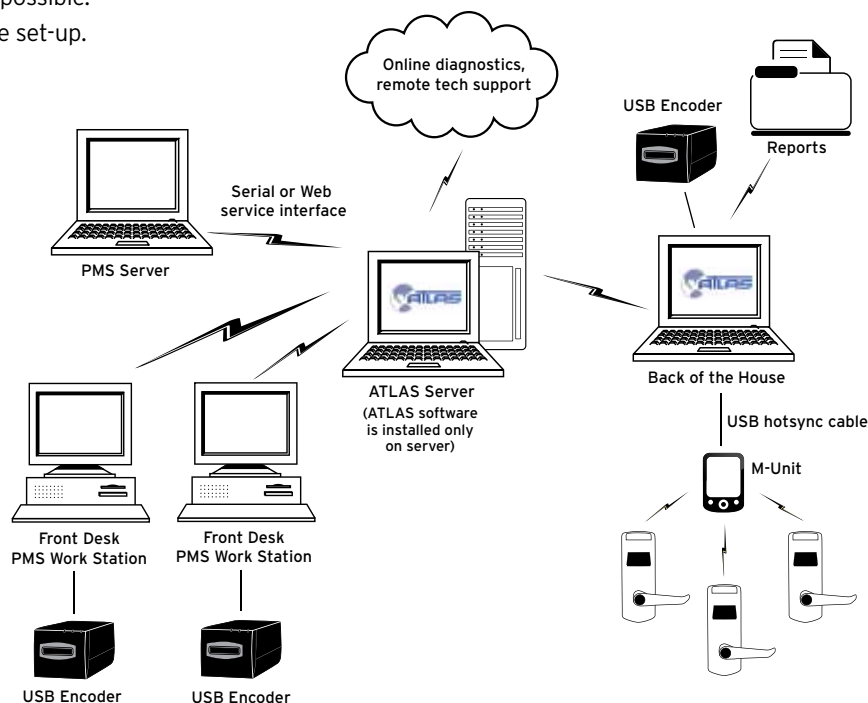

Selectable time zones and language options configure the ATLAS system for the individual needs of each hotel.

Scalable, Component-based Design

ATLAS accommodates any size hotel from single-station operations to networked, large-scale, full-service facilities. With ATLAS, you can manage up to 50 check-in workstations, 16,000 guestrooms, and 8,000 suites.

System Architecture

Many configurations are possible. Here is a standard, simple set-up.

Connectivity, Efficiency, Security

Pull Your Current Systems Together

ATLAS uses an open-architecture design in order to easily integrate with existing hotel systems including PMS, POS, self check-in kiosks, and cashless vending machines.

RFID Security

ATLAS is compatible with the 790 lock. Staff keycards can be audited and locks can be interrogated with keycards.

Capitalize on Existing IT Infrastructure

ATLAS is designed to be installed easily and operate fully on existing IT infrastructures. Once installed on a server connected to the network, ATLAS can be used on any network workstation, minimizing disruption to existing hotel operations. Simple maintenance is used to program and audit locks.

State-of-the-Art Hardware for Total Access Control

Heavy-Duty Door Locks

For superior guestroom security, ATLAS uses the high-performance ILCO 790 contactless, 770, Solitaire 710-II, and Generation E-760 electronic locks. With magstripe or RFID technology, full audit accountability and override capability, these stand-alone locks provide maximum security without compromising ease of use. A selection of designer finishes complements your hotel décor.

Remote Access Controller (RAC)

Make your guests feel privileged and secure by regulating access to restricted areas such as executive floors, spas, health clubs, elevators and parking areas. The RAC functions ideally in areas where it is impractical to mount a standard electronic door lock.

E-Plex 2000 Pushbutton Lock

A convenient, durable access control alternative. This pushbutton lock does not use keys or cards; a changeable combination opens the lock. The E-Plex 2000 pushbutton lock is convenient for store-rooms, offices, and many other back-of-the-house areas.

In-Room Safes

Allow guests to secure their valuables without relying on staff. A PIN and/or credit cards can be used to access the safe.

Hospitality Accessories

ILCO provides economical, reusable custom-designed keycards plus do-not-disturb signs, card holders, and cleaning. All manufactured under stringent ISO guidelines to meet ABA specifications.
